TMR Magnetic Field Sensor CYMR2103

The CYMR2103 linear sensor utilizes a unique push-pull Wheatstone bridge composed of four unshielded TMR sensor elements. The unique bridge design provides a high sensitivity differential output that is linearly proportional to a magnetic field applied parallel to the surface of the sensor package, and it provides superior temperature compensation of the output. The CYMR2103 is available in two packages: **SOP8** 6x5x1.5mm (P/N:CYMR2103P), or **DFN8** 3x3x0.75mm (P/N: CYMR2103D).

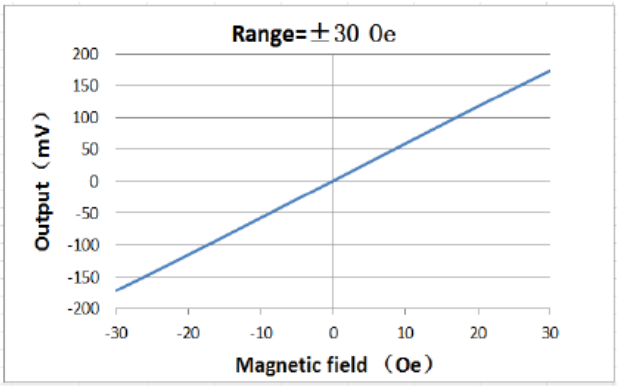
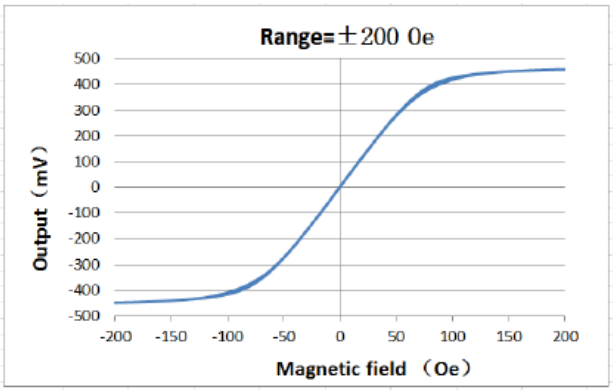
Transfer Curve

The following figure shows the response of the CYMR2103 to an applied magnetic field in the range of ±30 Oe (left) and ±200 Oe (right) when the CYMR2103 is biased at 1V. At low fields the CYMR2103 response is highly linear, and it is not harmed when the sensor is driven into saturation.





Oe (Oersted) = 1 Gauss in air = 0.1 millitesla = 79.8 A/m.
