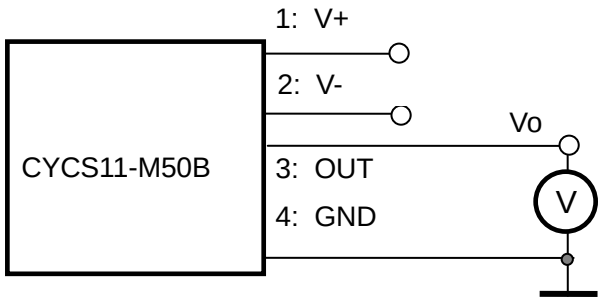
CONNECTION

The current carrying cable must pass through the window. The phase of output is the same as that of the current passing the window in the direction of the arrow indicated on the case.

1: V+ Power Supply
2: V- Power Supply
3: Output
4: Ground



Relation between Input and Output:

Sensor CYCS11-36M50B-1.0-10mA		Sensor CYCS11-15M50B-1.0-10mA	
Input current (rms, mA)	Output voltage (rms, V)	Input current (mA)	Output voltage (V)
0	0	-10	-5
2.5	1.25	-5	-2.5
5	2.5	0	0
7.5	3.75	5	2.5
10	5	10	5

Notes:

1. Connect the terminals of power source, outputs respectively and correctly, never make wrong connection.
2. The potentiometer can be adjusted, only if necessary, by turning slowly to the required accuracy with a small screwdriver.
3. The best accuracy can be achieved when the window is fully filled with current carrying conductor
4. The in-phase output can be obtained when the direction of current of current carrying conductor is the same as the direction of arrow marked on the transducer case.
