Split Core Hall Effect DC Current Sensor CYHCT-C2TV

This Hall Effect current sensor is based on open loop principle and designed with a split core and a high galvanic isolation between primary conductor and secondary circuit. It can be used for measurement of DC current etc. The output of the transducer reflects the real wave of the current carrying conductor.

**PIN Definition and Dimensions**

OFS: Offset Adjustment  
GIN: Gain Adjustment

**Connection**

1. Connect the terminals of power source, output respectively and correctly, never make wrong connection.  
2. Two potentiometers can be adjusted, only if necessary, by turning slowly to the required accuracy with a small screwdriver.  
3. The best accuracy can be achieved when the window is fully filled with bus-bar (current carrying conductor).  
4. The in-phase output can be obtained when the direction of current of current carrying conductor is the same as the direction of arrow marked on the transducer.

DIN Rail Adapter CY-DRA88

The DIN Rail Adapter CY-DRA88 is designed for mounting the sensor on 35mm DIN Rail. It has the size 70 x 24 x 23mm. The height from bottom to mounting surface is 14.8mm.
Mounting of Sensors

Sensor with Molex Connector
(The distance between the bottom und the middle of hole is 54.8mm)
