

AC Voltage Sensor CYVS11-xnS2

The **CYVS11-xnS2** AC Voltage Sensor/Transducer works according electro-magnetic induction and is designed for applications to measurement and monitoring of single phase AC voltage. The output signal (DC voltage or current) of this transducer is proportional to the average effective value (RMS) of input AC voltage. They are suitable for general applications such as fixed frequency voltage supplies etc.

Application:

- Monitor for over/under voltage
- Power monitoring
- Multi-point instrumentation needs
- Sense phase loss

Notice:

- Selection of output signal: Please select power source >12V at 0~10V output.
- Make sure that the polarities are in right connection. The output and the power supply must be common grounded at terminal 6.
- If a meter is used to calibrate the output of the transducer, please make sure that the accuracy of the meter is higher than the transducer.
